BEST AVAILABLE IMAGES

Defective images within this document are accurate representations of the original documents submitted by the applicant.

Defects in the images may include (but are not limited to):

- BLACK BORDERS
- TEXT CUT OFF AT TOP, BOTTOM OR SIDES
- FADED TEXT
- ILLEGIBLE TEXT
- SKEWED/SLANTED IMAGES
- COLORED PHOTOS
- BLACK OR VERY BLACK AND WHITE DARK PHOTOS
- GRAY SCALE DOCUMENTS

IMAGES ARE BEST AVAILABLE COPY.

**As rescanning documents *will not* correct images,
please do not report the images to the
Image Problem Mailbox.**

EXAMINER

HILLERY, NATHAN

ART UNIT	PAPER NUMBER
----------	--------------

2176

DATE MAILED: 07/02/2004

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No. 09/825,210	Applicant(s) KRAFT, REINER	
	Examiner Nathan Hillery	Art Unit 2176	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
 - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
 - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
 - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 02 April 2001.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-20 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-20 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 02 April 2001 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

1. This action is responsive to communications: Application filed on 4/2/01.
2. Claims 1 – 20 are pending in the case. Claims 1, 11, and 20 are independent.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1 – 3, 5 – 7, 10 – 13, 15 – 17, and 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Farber et al. (US 6654807 B2).

5. **Regarding independent claim 1**, Farber et al. teach that *the client gets the modified resource identifier from the reflector and makes a request for the particular resource from the repeater designated in the modified resource identifier. When the repeater gets the client's request, it responds by returning the requested resource to the client. If the repeater has a local copy of the resource then it returns that copy, otherwise it forwards the request to the origin server to get the resource, and saves a local copy of the resource in order to serve subsequent requests (Column 3, lines 18 – 27) and that if the particular requested resource itself can contain identifiers of other resources, then the resource may be rewritten (before being provided to the client). In particular, the resource is rewritten to replace at least some of the resource identifiers contained therein with modified resource identifiers designating a repeater instead of the origin server. As a consequence of this rewriting process, when the client requests*

other resources based on identifiers in the particular requested resource, the client will make those requests directly to the selected repeater, bypassing the reflector and origin server entirely (Column 3, lines 39 – 49), which provide for **defining contextual metadata** (modified resource identifier) **of the source document** (resource on origin server), **wherein the contextual metadata includes a location of the source document; identifying a target document** (rewritten resource); **bundling the target document, and the contextual metadata of the source document; and saving a bundled target document as the destination document** (local copy). Farber et al. do not explicitly teach **bundling ... as attributes of the target document**. However, it would have been obvious to one of ordinary skill in the art at the time of the invention to be motivated to do so using the invention of Farber et al. because the skilled artisan would want to ensure that the resource and the modified resource identifier are appropriately matched so as to provide a better way of *processing resource requests in a computer network* (Column 3, lines 1 and 2).

6. **Regarding dependent claims 2 and 3**, Farber et al. teach that *if the repeater has a local copy of the resource then it returns that copy, otherwise it forwards the request to the origin server to get the resource, and saves a local copy of the resource in order to serve subsequent requests* (Column 3, lines 23 – 27) and that *if the particular requested resource itself can contain identifiers of other resources, then the resource may be rewritten (before being provided to the client). In particular, the resource is rewritten to replace at least some of the resource identifiers contained therein with modified resource identifiers designating a repeater instead of the origin server* (Column

3, lines 39 – 44), which provide for **identifying the target document by a content and contextual data** and **merging the contextual metadata of the source document and the contextual data of the target document**. Farber et al. do not explicitly teach **merging ... as integral attributes of the target document**. However, it would have been obvious to one of ordinary skill in the art at the time of the invention to be motivated to do so using the invention of Farber et al. because the skilled artisan would want to ensure that the resource and the modified resource identifier are appropriately matched so as to provide a better way of *processing resource requests in a computer network* (Column 3, lines 1 and 2).

7. **Regarding dependent claims 5 – 7**, Farber et al. teach that *each reflector has its own rule base, which is manually configured by the reflector operator. B3. To reflect a request, (to serve a request locally go to B4), as shown in FIG. 4, the reflector determines (B3-1) the best repeater to reflect the request to, as described in detail below. The reflector then creates (B3-2) a new resource identifier (URL) (using the requested URL and the best repeater) that identifies the same resource at the selected repeater. It is necessary that the reflection step create a single URL containing the URL of the original resource, as well as the identity of the selected repeater. A special form of URL is created to provide this information. This is done by creating a new URL as follows: D1. Given a repeater name, scheme, origin server name and path, create a new URL* (Column 8, lines 25 – 42), which provide for **defining the address of the source document, identifying a URL of the source document and defining a navigation path from the source document to the target document**.

8. **Regarding dependent claim 10**, Farber et al. teach that *this invention provides a way for servers in a computer network to off-load their processing of requests for selected resources by determining a different server (a "repeater") to process those requests. The selection of the repeater can be made dynamically, based on information about possible repeaters. If a requested resource contains references to other resources, some or all of these references can be replaced by references to repeaters* (Column 2, lines 59 – 67), which provide for **saving the destination document on a networked data repository**.

9. **Regarding independent claim 11**, the claim incorporates substantially similar subject matter as claim 1, and is rejected along the same rationale.

10. **Regarding dependent claim 12**, the claim incorporates substantially similar subject matter as claim 2, and is rejected along the same rationale.

11. **Regarding dependent claim 13**, the claim incorporates substantially similar subject matter as claim 3, and is rejected along the same rationale.

12. **Regarding dependent claim 15**, the claim incorporates substantially similar subject matter as claim 5, and is rejected along the same rationale.

13. **Regarding dependent claim 16**, the claim incorporates substantially similar subject matter as claim 6, and is rejected along the same rationale.

14. **Regarding dependent claim 17**, the claim incorporates substantially similar subject matter as claim 7, and is rejected along the same rationale.

15. **Regarding independent claim 20**, the claim incorporates substantially similar subject matter as claim 1, and is rejected along the same rationale.

16. Claims 4 and 14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Farber et al. (US 6654807 B2) as applied to claims 1 – 3, 5 – 7, 10 – 13, 15 – 17, and 20 above, and further in view of Heninger et al. (US 6470349 B1).

17. **Regarding dependent claim 4**, Farber et al. do not explicitly teach **synchronizing**. However, Heninger et al. do teach that *in the case of caches, it is also useful to generate a source command to be placed in your target script referring back to the source script. This ensures that the target stays synchronized with the source* (Column 16, lines 16 – 20), which provides for **automatically synchronizing the destination document to the target document**. It would have been obvious to one of ordinary skill in the art at the time of the invention to combine the invention of Farber et al. with that of Heninger et al. because such a combination would provide the users of Farber et al. with *a server side scripting language and programming tool designed to simplify programming for web pages using databases or other dynamic information* (Column 2, lines 49 – 52).

18. **Regarding dependent claim 14**, the claim incorporates substantially similar subject matter as claim 4, and is rejected along the same rationale.

19. Claims 8, 9, 18, and 19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Farber et al. (US 6654807 B2) as applied to claims 1 – 3, 5 – 7, 10 – 13, 15 – 17, and 20 above, and further in view of Lumsden (as cited by applicant).

20. **Regarding dependent claims 8 and 9**, Farber et al. do not explicitly teach **input parameters or input search query**. However, Lumsden teaches that *the user fills out the form, specifying the user's search parameters or criteria, which are often in the form of keywords. The user's search parameters or criteria are intended to define a subset of documents from the Internet which contain information which the user wants to review. The desired documents may be on any of a plurality of databases associated with any of the sites (document servers) linked together by the Internet. The user completes the search form and forwards the completed search form to the search server 62 via the network 64 (Step 102) (Column 5, line 61 – Column 6, line 3), which provide for defining input parameters required to generate the target document and defining an input search query*. It would have been obvious to one of ordinary skill in the art at the time of the invention to combine the invention of Farber et al. with that of Lumsden because such a combination would provide the users of Farber et al. with a *software implemented process associated with a server employed to provide search information in response to a request from a user at a client for documents available on the Internet matching search criteria* (Column 2, lines 50 – 54).

21. **Regarding dependent claim 18**, the claim incorporates substantially similar subject matter as claim 8, and is rejected along the same rationale.

22. **Regarding dependent claim 19**, the claim incorporates substantially similar subject matter as claim 9, and is rejected along the same rationale.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Nathan Hillery whose telephone number is (703) 305-4502. The examiner can normally be reached on M - F, 8:30 a.m. - 5:00 p.m..

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Joseph H. Feild can be reached on (703) 305-9792. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
